**For Immediate Release:**

**ICC Global Hosting Announces Availability of Hosted BYO for Pilots and Production Virtual Desktop Deployments**

*A Comprehensive, Cloud based, hosted “bring your own computer” offering that allows organizations to rapidly deploy BYO virtual desktop pilots and outsource production BYO deployments.*

Atlanta, GA, May 16, 2011 – ICC Global Hosting announces immediate availability of its Hosted BYO service for pilots and production of hosted virtual desktops for organizations wanting to rapidly pilot or deploy a “Bring Your Own Computer” program for their employees. BYO programs allow employees to select their own computing device or bring their own computer to work while accessing their employer’s supported desktop environment, applications, and data through use of a virtual desktop. ICC’s Hosted BYO service gives organizations a method to pilot or provide production virtual desktops without any capital expenditure while fully integrating into their existing IT infrastructure from any device, anywhere, and anytime.

ICC Global Hosting’s Hosted BYO service provides either a complete three to six month BYO pilot or on-going support for full BYO deployments. ICC’s Hosted BYO service integrates with a client’s network infrastructure and includes a Windows desktop user experience including standard desktop applications, anti-virus, custom applications, and network data storage. Supported end point devices include PCs, laptops, thin clients, Macs, iPads, iPhones, and Android tablets. Hosted BYO users may access their hosted desktop from any combination of supported devices from the office, home, or other remote locations.

“Many organizations want to test or implement bring your own computer programs but often don’t have the infrastructure or resources to support an internal BYO program. Our Hosted BYO service gives our customers an immediate solution without capital investment or on-going support,” said Tim Hites, president, ICC Global Hosting. “ICC’s Hosted BYO can make the difference in a BYO program up and running in days or weeks versus a project that gets pushed off until next year.”

“With the explosion of new devices, tablets, smartphones and high-end laptops, users are demanding more freedom to bring their own devices to work and get access to corporate resources. This can present challenges for IT in managing and securing these devices. However, Citrix desktop virtualization solutions allow IT to give this freedom to their users while still maintaining security and control of corporate applications and data. As a Citrix Service Provider, ICC leverages Citrix technology to offer a hosted service for “bring your own” initiatives that not only provides for device flexibility but also eliminates the need to build out a complete infrastructure to pilot or implement a BYO program,” said Calvin Hsu, senior director of product marketing, Cloud App Delivery group at Citrix.

ICC’s Hosted BYO service is available immediately with a 10 user minimum. BYO pilots are available for three to six month terms and production BYO deployments are available for extended terms. A three month Hosted BYO for ten users is available for \$2,285 including set-up and monthly fees. For more details about ICC Global Hosting’s Hosted BYO service, please visit ICC’s website at <http://www.iccglobalhosting.com/BYO.shtml>.

**About ICC Global Hosting**

ICC Global Hosting is the leading virtual desktop hosting company providing desktops as a service in a Cloud computing environment. ICC customers enjoy the benefit of hosted virtual desktops and hosted virtual applications with consistent performance, the latest software versions and patches, and increased data security. Our Cloud computing delivery methodology allows our customers to move their desktop and application computing expenses from a CapEx to an OpEx expenditure which reduces their overall costs. We have a tradition of excellence in support and have proudly served our clients for the past 27 years. For more information, visit <http://www.iccglobalhosting.com>.
